TRUASSET® Mobile Asset Tracking

Mission Assurance via Mobile Asset Tracking

Organizations that depend on mobile teams and services have more than just vehicle deployment/status and driver management to worry about. The “**payload**” of equipment and product associated with the mission is critical to its success. Managing this payload is usually manual, and is dissociated from the vehicle/driver management systems, increasing probability for error and poor performance.

Tallymatics’ TruAsset system uses the power of Bluetooth wireless tags, combined with in-vehicle Sprite TW400 LTE-M Tracker gateways to bring the world of fleet management and mission management together. TruAsset ensures that the **right payload** is on the vehicle before you set out and **prevents loss of assets** by notifying when and where an item has gone missing. Fixed locations, such as depots and warehouses are also equipped with gateways, and system wide reports show the historical and current disposition of all inventory. **Mission success** requires **payload awareness**, delivered **on time** by TruAsset Mobile Asset Tracking.

Solve the problem of Inventory Awareness on the road

TruAsset removes one of your biggest mission exposures

Inventory Management is critical for a business, but all visibility, relative control and timely recourse “goes out the door” when your vehicles leave for a call. This is where the “rubber meets the road”, and failure to have the right equipment and material is expensive to redress when the vehicle departs.. Everything is in flux, and control is minimal. Matching inventory with the mobile environment is critical. TruAsset bridges the mission environment with your enterprise management systems to give you the results you expected.

BLE Beacon

TruAsset Features

- Pre-trip payload check. Make sure everything is there before you embark
- Audit trail. Understand when payload items were placed onboard and removed.
- Eliminate lost assets with accurate “last location” records and “left-behind” notifications
- Optimize assets with deployment vs. mission analysis
- Locate needed items/class of items
- Adjust inventory to usage
- Monitor assets in fixed locations: depots, warehouses
- Remove Human Error and improve Personnel satisfaction by auto-checkin/out. No more managing by lists and counting.
- Birds-eye report of all inventory & associated transactions showing current locations and historical movement
- Small or Large fleets. TruAsset is part of TruFleet Cloud SaaS. No expensive local infrastructure or support required.

Improve Situational Awareness

Proof of Performance

Improve Productivity

Reduce Operational Costs

TruFleet’s AVL solution is an **integrated Software as a Service application** which tracks the location of cellular telematic devices. The solution continuously monitors the vehicle’s movements and relays the information through TruFleet which can be viewed on any web browser.

TruAsset, powered by Bluetooth Beacons affixed to assets and tracked by the TW400 gateway extends visibility to your onboard assets: equipment and product.

About Tallymatics: Tallymatics manufactures high performance, telematics products and solutions for a wide range of applications. With support for both RF wireless and data networks, Tallymatics enables high-resolution location awareness of mobile field assets across any type of wireless network.
